

Fixed Price On-Site Computer Service at \$127

How to get your Slow Tired Computer Cleaned, Restored and Running like New

Order the service within 7 days ...and you get several valuable bonuses.

What brands & types get serviced?

All brands are serviced – locally assembled, Dell, HP, Acer, Packard Bell, Compaq, Toshiba, IBM, Gateway, Lenovo, Sony and Asus. In addition, all types of computers are serviced, whether purchased from any local shop, wholesaler or Internet, including laptops and desktops, used in the home or office. There is only one common denominator – they must run the Windows operating system (Windows 2000®, XP® or Vista®). You get all this for \$127 (certain conditions apply).

Optional extras installed with no labor charge

Use this maintenance opportunity to have your computer upgraded with more RAM. This is the most cost effective way to increase the speed of a sluggish computer. Also, you could have your computer CD player upgraded with a DVD drive for increased storage and convenient backups. DVDs have nearly seven times the capacity of a CD. In addition, unnecessary cables can be removed by using wireless keyboards and mice. Reclaim desk space by using flat-screen LCD monitors.

Yes, all this for an unbelievable \$127

In a normal business environment, this maintenance opportunity is worth much more. There are absolutely no hidden charges or after-service obligations to fulfill...just utilize the service and get the benefits.

Preventive maintenance means future cost savings

The cost of computer hardware has declined dramatically in the last few years; unfortunately, this has not reduced the total cost of ownership, or TCO. The TCO is comprised of five components: the hardware, the software, the installation, the training or learning phase and the repair and maintenance. Industry analysts have demonstrated that the initial purchase price of a business computer is potentially far outweighed by the associated costs over its life cycle. Lowering TCO doesn't involve shortcuts or magic, just common sense and logical thinking. Use this offer to get your computer maintained at a fixed price.

How long have you and your company been operating in the computer industry?

With over 20 years of computer and networking experience, **ComputerWorkx** is able to handle all of the computer tasks at hand.

The real truth about computer servicing

Important point number 1: Usually computer maintenance is not performed until something happens – a hardware malfunction or software glitch. The service and price you pay depends upon the technician's experience. In the end, you may get an unpleasant surprise with the cost of the service. What is really needed is the McDonalds concept, where you receive consistent, good quality at a reasonable fixed price.

Important point number 2: Another significant factor is that a fixed price "removes the pressure." When you are working on an hourly rate basis, there is pressure to get the job done as quickly as possible. This can create an atmosphere where mistakes can occur or something is easily overlooked. Having a fixed-price system with a structured checklist eliminates those kind of errors.

Important point number 3: A step-by-step structured checklist at a fixed price is the only way to achieve a reliable standard of service. Computer technicians all have varying degrees of skill and education, but utilizing a structured checklist accomplishes consistent results.

You must apply within seven days to get the special bonuses

The three bonus offers are only available for seven days.

Our computer service checklist

We utilize a step-by-step checklist, which provides uniform results...just like an airline pilot's checklist.

Details of the service package... what you get for \$127

- Unnecessary files and software removed and uninstalled.
- The computer registry (a store of info about a computer's configuration which can get bloated and fragmented) cleaned and fixed.
- Diagnostic software run to test the hardware (a crashing computer may mean faulty hardware).
- Security investigated with Microsoft® tools and necessary updates implemented.
- Computer scanned for any malicious software, malware, spyware, etc.
- Data on disk defragmented, as required.
- Antivirus software checked and updated.
- Backup process established (where you own backup hardware) so that data is routinely backed up.
- PC covers removed and all cooling fans checked.
- Dirt and dust cleaned from computer.
- Any dust lodged in heat sinks or power supply areas removed with antistatic compressed air (parts are extremely vulnerable to static electricity).

Certain conditions apply to this Offer

1. In some instances where computers have corrupted software, it may be necessary to perform a complete software rebuild where your hard drive is reformatted and all software and data reloaded. You get an accurate quote for any extra work involved.
2. The service work is on a non-urgent basis.
3. This \$127 offer does not include the cost of any parts (new cooling fans, etc.) and only applies to one PC.

Don't let this cost-saving opportunity slip away

You must apply within seven days in order to receive the bonuses offered.

Does your computer operate slowly, crash often and drive you crazy? Are you sick of waiting ...watching the hourglass? Studies show that fifty-percent of all computer crashes are caused by spyware, viruses and Trojans. Have you ever been the last person left working late, alone, due to a faulty computer?

Dust build-up in your PC is a common origin of malfunctions. It acts as a thermal insulator which prevents proper system cooling. In addition, grime accumulates between computer parts creating dirt bridges that cause short circuits in humid and damp conditions. Cooling fan failure is also a common cause of computer breakdowns. A computer needs a constant cooling airflow to operate effectively and efficiently. Problems eventually will occur if heat sinks and vents are clogged with dirt or other debris.

Reducing the cost of computing

One sure-fire way of reducing the cost of computing is through proper periodic maintenance. By spending a little on routine service, you reduce the chances of unexpected large repair bills.

The on-site solution

What you need is a software tune-up. Your computer is checked for viruses and spyware, unnecessary software and files removed and security updates applied. As a bonus, you get your computer internally cleaned by a qualified technician. **You get all this maintenance performed by a qualified technician on-site in one session for a one-time fee of \$127 per computer.**

The bonuses you get

Order this special service within 7 days and you get the following:

Bonus number 1: You get your desktop (no laptops) computer internally cleaned to remove dust and grime. You need a qualified person to open up, "poke around" and clean your computer. During the internal cleaning process, cables could disconnect and require a basic troubleshooting exercise. Unlike cleaning the outside of a computer...where anyone can accomplish this task.

Bonus number 2: You get a valuable CD loaded with software to keep your computer in top condition after the service. These tools will provide you with Anti-Virus and Spyware protection.

Bonus number 3: You get set up for an automatic backup process to a removable device (removable device not included). One tiresome task that is often overlooked is regular backups of email and other important documents. Here this "chore" is set to run automatically and unattended at regular intervals; the time of day the backup will run in the background is set and will not interrupt your work.
